Press Release

InControl Technology announces the availability of the InControl Watchdog monitoring system.

Watchdog provides an automated, proactive Administration Support tool to InControl's MasterControl customers and partners.

San Diego, August 15, 2006: InControl Technology, Inc., a leading supplier of 100% Web-based IT Asset Management solutions, today announced the introduction of the ICT (InControl Technology) Watchdog Monitoring utility. The "Watchdog" provides MasterControl users with proactive support utilizing this new monitoring system that allows the customer to be notified of any issues or problems with the functionality or use of the MasterControl software solution. The powerful benefits, in addition to the strength of the MasterControl Suite, give the customer the ability to automatically restart the InControl Management service and email all error logs directly to InControl Support to head off and handle any potential problems before they occur, or in "just-in-time" mode. This is critical for clients that use MasterControl powerful source of trusted data about their IT environment to feed or enable other enterprise applications like Help Desk, ERP and Human Resource system. Users now, without expensive overhead and administration, can be confident the system will be up and running through any and all configuration changes and be able to see and correct anomalies before they become a problem.

The ICT Watchdog monitors the general health and operations including the error logs from the core system out to the user interface.

"Application costs and administration are causing many IT organizations to rethink the IT Cost formula. A CIO Executive Council survey in April 2006 found that 12 percent of the 51 CIO's interviewed faced what they called 'very high' pressure to cut costs, while another 28 percent had 'significant' pressure. "

For users with expiring licenses, InControl Watchdog Administration sends the user an email notifying the administrator of any pending license expirations. This assures the customer that they will not be faced with an expired license message interrupting the operation of the InControl suite of products.

"Cost management is a mission critical aspect of IT's mission, the 'Watchdog' helps partners and users effectively manage the application environment and utilize the technology to monitor itself rather than having human over sight" said Ben McCullom, Vice President. "By doing this, we effectively assist the CIO in moving their valuable human resources to the point and where they are most valuable and cost effective."
