

Asset Intelligence for
Asset Management

Key Features & Benefits

- First Intelligent solution for Asset Management
- Agent-less discovery and inventory (**requires no software agent on the client**)
- Integrates with Existing Infrastructure – CRM, ERP, Service Desk
- Automated discovery of all Networked assets (hardware, software, networking devices)
- Asset normalization for reliability
- Low network bandwidth consumption
- Web Based GUI & SQL Database
- Microsoft .NET framework

Application Support

- Life Cycle Management
- Leasing, purchase & retirement tracking
- Warranty tracking
- ITIL compliance
- Sarbanes-Oxley (SOX) compliance reporting
- Licensing compliance audit reporting
- Business planning and business intelligence

InControl Technology

The MasterControl Suite is focused on delivering **Asset Intelligence**. MasterControl lets organizations and service providers automate the process of discovery of all networked attached devices, hardware and software inventory of those devices, tracking of people and locations assigned to the asset and providing actionable information regarding the IT infrastructure. MasterControl achieves this through the intelligent collection and normalization of asset information, **without requiring software agents**. MasterControl eliminates the manual steps in gathering and integrating asset information by automating the collection process that causes errors and increases costs. MasterControl allows companies to eliminate their deployment costs, lower their IT operations costs, increase business efficiency, increase asset accuracy and manage corporate risk.

MasterControl Suite

MasterControl includes the applications necessary to intelligently manage today's complex IT organizations Assets, end-to-end. The MasterControl suite includes iReporter, iScanner, iNspcator and iBusiness Manager.

iReporter™

The iReporter is built on a highly scalable search engine and Windows .NET framework that allows customizable and configurable views of asset information. Ad hoc queries and reports can be viewed daily, monthly or in response to a compelling event, such as a merger or early asset termination. Features of the iReporter include comprehensive reporting for line of business (LOB), asset tracking, security scans, software usage, patch scans and enhanced alarming and notification. The iReporter is integrated with existing enterprise applications such as Directory Services (LDAP, Active Directory and NDIS) and ERP systems.

iScanner™

The iScanner is a core component of the MasterControl system. Where other products rely on 3rd party tools or non-integrated subsystems to loosely gather IT data, the iScanner is built into the core architecture and provides the ability to not only collect IT data automatically but also to normalize the data in a way where it can be "trusted" as information. Key features of the iScanner include

Automated IT discovery of all connected devices including computer Scans of hardware, software, and network devices. For scheduled scanning during non-peak hours, the iScanner allows flexible, timed scans and customizable network bandwidth throttle rates. iScanner supports new technologies such as wake-up on LAN and wireless LAN.

iScanner auto-discovers

- Operating systems (Windows, UNIX, Linux+, HP-UX, Solaris, MAC, and AIX).
- Hardware devices including handhelds and networked printers.
- Networking equipment including Switches, Routers and ATM's.

iBusiness Manager™

The iBusiness Manager provides organization with a single web-based front end for consolidation and tracking of contracts and financial data. The iBusiness Manager provides the ability to share contracts with multiple organizations allowing better financial accountability and lowering costs. iBusiness Manager supports contracts for hardware purchasing and leasing, software compliance audits, warranties, moves, adds and changes (MACS), financial cost structure, Sarbanes-Oxley and ITIL compliance, work flow, and outsourcing. The iBusiness Manager leverages the MasterControl framework to provide business intelligence to Assets.
